

Underwater Pump Mining Dredge

MARLIN electric

The Marlin Class underwater pump mining dredge was designed to meet the needs of deep mining deposits as an efficient tool to excavate materials. With discharge sizes ranging from 8" (203mm) to 24" (+) (610mm), the Marlin offers an array of production ranges and flow conditions. Since each Marlin is designed specifically for a particular deposit, the digging depths can range from 35' (10m) to 200-feet (+) (61m). The deep digging depth is made possible by the use of an underwater pump system with a high torque cutter drive assembly. To complement the rigorous demands of deep mining, the Marlin offers the most intense dredge design and is clearly unmatched in the dredging industry.

General: all dredges feature a PLC based operating system, magnetic flow meter, electro-proportional hydraulic circuits, hi-capacity service water system, Maximizer suction dilution valves, double helical gear reducer for dredge pump reduction, TEFC electric motors, Variable frequency AC dredge pump motor drive and 3-wire mooring system. Detailed specifications available upon model determination.
